ABSTRACT

This thesis analyzes the defense capability of Japan Maritime Self-Defense Force(JMSDF) in the post-Cold War era. The primary research question is: “What changes will and should be expected for JMSDF after the collapse of the former Soviet Union?” To answer this question, I reviewed the defense capability buildup program during Cold-War, and made briefly analyzed the relationships among the Asian-Pacific countries, including U.S. Pacific forces and Russia. I also conducted a cost/benefit and personnel analysis of the current fleet configuration and a proposed new configuration. These alternatives may require drastic changes in public attitudes based on serious discussions among the Japanese people and politicians, and a tighter Japan-U.S. relationship on both economic issues and national security burden sharing.

I. INTRODUCTION

A. BACKGROUND

The end of the Cold War caused a great change in the strategic environment and significantly reduced the possibility of world-scale war. Consequently, the United States, the former Soviet Union, and European countries are promoting plans to further avoid confrontation. A movement towards arms control and disarmament has gained momentum.¹ On the other hand, various local conflicts due to religious or ethnic problems are on the rise in many parts of the world.

In the Asian-Pacific area, however, no major changes similar to those in Europe have occurred. Issues such as the rightful ownership of Japan's Northern Territories, Korean Peninsula, and the Spratly Islands remain even after the end of the Cold War. With regard to the Spratlys' situation, China is trying to modernize its armed forces and strengthen its position in the surrounding area. This is of great concern to nearby countries.

Today, many Southeast Asian countries are increasingly modernizing their forces and purchasing advanced weapons. One could say that this region might present the greatest challenge to peace during the 21st century. Although the Japan-U.S security relationship will continue to be valuable in preserving stability in this region, a shifting American strategy in conjunction with a continued downsizing of American forces in the region could affect Japan's policy.

The Japan Maritime Self Defense Force (JMSDF) is also facing many tough decisions regarding its military budget and strategy. Downsizing and reconfiguration of the JMSDF must take

¹Defense of Japan 1994 (Defense Agency)

into account not only domestic considerations, but also the dynamic and shifting security environment of the region.

B. PURPOSE

The purpose of this thesis is to study JMSDF's future mission and capability in the context of declining Japanese GNP growth, a changing U.S. presence in the Pacific, the diminished Russian threat, and an increased Chinese maritime capability. In contrast to the certainty in the Cold War-era, Japan is facing a more dynamic and potentially uncertain geographical and economic environment. In view of these changing circumstances, this study examines the costs and benefits of various budget alternatives, R&D choices and fleet-mixes for the JMSDF.

The primary research question is what changes will and should be expected for the JMSDF after the collapse of the former Soviet Union?

Three subsidiary questions follow:

1. What will be the JMSDF mission in the post-Cold War period?
2. What will be the JMSDF's budget, R&D and fleet-mix options?
3. What are the resources and political constraints for these options?

C. FRAMEWORK OF THE RESEARCH

1. Outline

This thesis consists of five chapters. Chapter II reviews the defense capability and mission of the JMSDF during the Cold War. Chapter III includes an estimate of the future military balance in East Asia. Chapter IV includes cost/benefit and personnel analyses of alternative fleet configurations and R&D strategies. Chapter V provides findings and a conclusion.

2. Methodology

Data will be collected from the Japan Maritime Staff Office in Tokyo as well as from the Japanese government and commercial publications, and "Military Balance." The military balance in the region will be quantified using data from the JMSDF Staff Office and other open sources.

II. DEFENSE CAPABILITY AND MISSION OF JMSDF DURING THE COLD WAR

A. MILITARY SITUATION AROUND JAPAN DURING THE COLD WAR

The global military situation has developed within the basic framework of military confrontation between the Western and Eastern collective systems, centering respectively on the United States and the Soviet Union. This focus dominated from the end of W.W.II until the collapse of the Soviet Union. During the Cold War, the Soviet Union possessed powerful nuclear forces. In addition, they deployed enormous ground and air forces in their territory, as well as in East European countries and the Far East. To counter the Soviet threat, the United States provided its allies with a so-called "nuclear umbrella." They further deployed ground and air forces to allied countries in Europe and Asia on the Soviet Union's periphery. This signaled their defense commitment to the allies.

Under the aforementioned conditions, the Far East has been an area of great importance in the U.S.-Soviet relationship of military confrontation across the Pacific Ocean. Japan is located at the eastern end of the Far East, on the most vital sea route leading to the Pacific Ocean from the Asian continent thorough the Sea of Okhotsk, the Sea of Japan, the East China Sea, and other adjoining areas. This means that Japan is invaluable in any military confrontation between the U.S and the Soviet Union.

Both geographically and historically, the Korean Peninsula has been intimately related to Japan. Maintenance of peace and stability on the Korea Peninsula has a significant bearing on the peace and stability in Eastern Asia, including Japan. There has been no immediate prospect for peace through dialogue between North and South Korea. More than 1,200,000 ground

personnel from the two countries stand guard against each other across the DMZ.

China has been striving to modernize its equipment. This rapid modernization presents an increasingly difficult condition. Though the relations between China and the Soviet Union have shown signs of improving in recent years, no basic change had been observed in the military confrontation between the two countries.

B. THE SIGNIFICANCE OF SEA POWER AND JMSDF'S MISSION

Japan relies heavily on others for its supply of resources, energy, food and other materials that are vital to its existence. Therefore, defending its surrounding sea areas and securing the safety of maritime traffic are extremely important. Secure lines of communication provide a foundation for its national existence. During the Cold War, it was believed that Japan's maritime traffic would be obstructed by attacks on ships sailing around Japan and by the mining of Japanese ports and harbors using Soviet submarines, aircraft, and surface ships.

Therefore, JMSDF needs to maintain safety for maritime traffic by foiling the advance of enemy forces and reducing their strength. The JMSDF also needs to effectively block enemy operations through surveillance, escort operations and extensive defense measures for ports, harbors, and straits.

The JMSDF has the following missions in order to achieve these objectives:

- In surrounding water areas, anti-submarine units (fixed-wing anti-submarine patrol aircraft) will patrol wide areas, while destroyers will patrol key shipping lanes to gain control of enemy ships deployed in the ocean to attack Japanese shipping. In addition, destroyers and anti-submarine units will escort ships whenever necessary. While patrolling in Japan's territorial waters and

escorting ships, the JMSDF will wage anti-submarine, anti-surface ship and air defense warfare.

- In coastal areas, mine sweeping units, anti-submarine patrol units, (chiefly anti-submarine helicopters), and destroyers deploy in and around key ports and harbors where shipping traffic is particularly thick, to secure the safety of ships. In this case, anti-submarine and mine warfare will be waged appropriately to counter the enemy threat.

- In key straits, destroyers, submarines, and anti-submarine aircraft will wage anti-submarine, anti-surface ship, and mine warfare against enemy ships attempting to force their way through such straits.

- In air operations at sea, destroyers will carry out air defense operations to protect ships.²

C. DEFENSE CAPABILITY BUILD-UP PROGRAM DURING THE COLD WAR

After World War II, Japan was occupied by the Allied powers, and its military system was dramatically reformed, including disbanding the armed forces. Among the Allied Powers, the Soviet Union maintained its massive military might and spread its influence and military control over East European countries and other areas. In spite of the U.S., the Soviet Union increased troop mobilization and built-up its military. Because of this, the free world countries sensed a crisis and formed the North Atlantic Treaty Organization (NATO) with the United States at its core. At the same time, the Soviet Union strengthened its alliance and sphere of influence by establishing the Warsaw Pact Organization (WPO).

1. The 1950's

The Korean War broke out in 1950, amid the currents of East-West confrontation. Since the U.S. Forces stationed in Japan were deployed to the Korean Peninsula, Japan formed the National Police Reserve Force to maintain public security. The Peace Treaty with the U.S. and the Japan-U.S. Security Treaty

²Defense of Japan 1994(Japan Defense Agency) p83

were signed in 1951. Japan restored its sovereignty and started as a new member of the free world. The National Police Reserve Force merged with the Maritime Guard Force into the National Safety Agency. The Defense Agency and the Self Defense Force (SDF) were instituted in Japan to protect against direct or indirect invasion.

Japan adopted its "Basic Policy for National Defense," which later served as the primary guideline for defense policies (see Appendix A). Based on these policies, Japan formulated a series of defense build-up programs to establish a defense foundation.

The 1st Defense Build-up Plan (1958-1960) focused on increasing the mainstay of the defense establishment by improving the ground defense capability. It also developed some maritime and air defense capabilities. This plan served to offset the reduction of U.S. land forces stationed in Japan, which were being rapidly re deployed. This program's achievements are presented in Table 1.³

Basic unit	
Anti-submarine Surface-ship Units(for mobile operations)	3 escort flotillas
Anti-submarine Surface-ship Units(district units)	5 divisions

Table 1. Achievements of the 1st Defense Build-up Plan.

³Defense of Japan 1994 (Defense agency) p106

2. The 1960's

Two significant changes occurred in this decade. First, the U.S. and the Soviet Union began negotiations and collaboration to avert confrontation of critical proportions. The 1962 Cuban missile crisis⁴ served as the momentum. These efforts crystallized in the Limited Nuclear Test Ban Treaty, signed in 1963, and the Strategic Arms Limitation Treaty (SALT I), signed in 1972, among others. However, the East-West confrontation continued.

Second, an inclination toward multi-polarization became obvious in both the East and West camps. In 1966, France withdrew from NATO to pursue its own military policies. NATO itself changed from a unilateral reliance on the United States to cooperation between the United States and West European countries. Due in part to a downturn in its economic might, the United States began to seek increased defense participation by its allies, to lessen its own defense burden. In the East camp, the Sino-Soviet conflict surfaced and became increasingly intense. Moves toward liberalization in East Europe were contained after the military interference in Czechoslovakia in 1968 by the Soviet Union and its allies.⁵

Given an atmosphere ripe for conflict, the 2nd Defense Build-up Plan (1962-1966) was formulated with its main focus on improving the defense capabilities. This plan's goal was to counter a small, conventional invasion of Japan. The scale of the hypothetical invasion was smaller than that of a local war.

The 3rd Defense Build-up Plan (1969-1971) continued this objective. To attain this goal, the plan improved and

⁴In the crisis, it was learned that the Soviet Union was installing medium-range missiles in Cuba, and the United States forced the Soviet Union to withdraw the missiles by conducting a maritime blockade and other measures against Cuba.

⁵Defense of Japan 1994 (defense Agency) p107

reinforced the quantity and quality of the Ground, Maritime and Air Self-Defense Forces considering diverse conditions at home and abroad.

Regarding Japan-U.S. security, a strong military posture added support to the U.S. military's right to be stationed in Japan. Therefore, Japan proposed revising the treaty so that the Japanese military could realistically be developed in time of war. The treaty was subsequently revised into its current form and signed in 1960.

The results of the second and third Defense Build-up Plans are presented in Tables 2 and 3.⁶

Table 3. Achievements of the 3rd Defense Build-up Plan

3. The 1970's

In the first half of the 1970's, dialogue between the United States and Soviet Union made headway, and East-West relations developed some stability through so-called "détente." Under these circumstances, the 4th Defense Build-up Plan(1972-1976) was formulated. However, the numbers of tanks, ships, and aircraft in this plan were scaled back in 1975. This revision was necessary because of deteriorating economic and fiscal situations after the first oil crisis.

The "National Defense Program Outline" was formulated in 1976, based on the current international situation. It considered recruiting problems and other domestic factors. The achievements of the 4th Defense Build-up Plan and National Defense Program Outline are presented in Tables 4 and 5.⁷

Table 5. Achievements of the National Defense Program Outline

4. The 1980's

The Soviet Union initiated domestic reforms (perestroika, etc.) under the leadership of Mikhail Gorbachev in 1985. A policy of collaboration was adopted with the West. As a result, arms control and disarmament between the West and East progressed, slowing the expansion of the Soviet Union's influence on Third World countries.

The democratization of East European nations progressed rapidly. In 1989, the Berlin Wall collapsed, and the "end to the Cold War" was declared at the U.S.-Soviet summit in Malta. The Warsaw Pact Organization (WPO) was dissolved in 1991, and the Soviet Union itself subsequently disintegrated.

III. FUTURE MILITARY BALANCE IN EAST ASIA

The end of the Cold War greatly changed the strategic environment. The United States, the former Soviet Union, and European countries made plans to reduce and restructure surplus war supplies. These countries moved away from an East-West confrontation and towards arms control and disarmament.

On the other hand, various local regional and ethnic disputes, previously constrained under the East-West confrontation, began to surface or expand. Some countries in the Asian-Pacific area still faced complex military issues and difficult decisions based on their visions of national security. There were still many unsettled issues, such as the Korean Peninsula, the Spratly Islands, and Japan's Northern Territories. A major movement towards peace initiatives, like that which occurred in Europe after the Cold War, has not taken place in the Asian-Pacific Area. 'Asian Security' says:

Changing circumstances, however, have made it necessary to examine the stresses being put on relations in Asian Security.

The time is ripe for considering where international relations in the Asian-Pacific region are headed and what type of regional system would be desirable.⁸

Against this background, many countries have been trying to improve and modernize their defense capabilities. As 'Asian Security' notes:

Asian countries have moved in exactly the opposite direction. Their defense budgets have risen in actual terms, with much of the increase going towards the purchase of new weapons systems. These trends have led to concern that an arms race is now underway in Asia.⁹

If so, what is the future military balance in East Asia?

⁸ASIAN SECURITY 1994-1995 (Research Institute For Peace and Security) p1.

⁹ASIAN SECURITY 1994-1995 (Research Institute For Peace and Security) p13.

Answering this problem requires discussing the military situation in countries which have influence in the Asian-Pacific area, including: the United States, Russia, China, South Korea and North Korea.

A. THE UNITED STATES

The end of the Cold War caused a great change in the strategic environment and reduced the possibility of world-scale war. The United States promoted plans to avoid further confrontation. A movement towards arms control and disarmament gained momentum. However, some of the same issues still remain to be solved among the Asian-Pacific countries as existed during the Cold War.

The United States has remained committed to protecting her own interests and those of her allies in the Asian-Pacific area. The deployment of the Pacific Command, a unified command consisting of Army, Air Force, Navy, and Marine Corps units, has served as a deterrent to conflict.

The Bush administration adopted the "East Asia Strategic Initiative" (EASI) and made it clear that the U.S. would continue to maintain bilateral arrangements and forward-deployed forces. In November 1991, U.S. Secretary of Defense Cheney stated six principles concerning U.S. strategy in East Asia, as follows:

- Guarantee of U.S. commitment to the Asian-Pacific region.
- A strong framework of bilateral security arrangements.
- Maintenance of a forward deployed presence of highly competent forces, though not big in scale.
- Ensuring enough bases overseas to support forward deployed forces.
- Greater responsibility of Asian allies for their own security.

• Complementary defense cooperation with the allied countries in the region even after the end of the Cold War.¹⁰

The Clinton administration has stated that the U.S. will maintain its involvement and a strong military presence in this region.¹¹ According to the "Bottom-Up Review" announced in 1993, the U.S. will continue to deploy nearly 100,000 military personnel in East Asia, including the Marine Corps and Air Force in Japan, and the Seventh Fleet in the Western Pacific.

However, 'Asian Security' says, "Despite U.S. assurances that the U.S. Military will remain engaged in Asia, there is a chance that the U.S. defense budget, domestic difficulties, and/or isolationist pressures will cause a larger and quicker departure of U.S. forces than expected."¹²

Figure 1 shows the trend of the U.S.'s major naval forces deployed in the Pacific from 1985 to 1993. Figure 1 illustrates the reduction of naval forces in spite of the U.S.'s strategic statements (see Appendix B).

¹²ASIAN SECURITY 1993-1994 (Research Institute For Peace and Security) p56.

Figure 1 . Major U.S. Naval Forces Deployed in the Pacific:
1985-1993

B. RUSSIA

Since the collapse of the Soviet Union, Russia has been in a transitional period, shifting from totalitarianism to democracy and from socialism to capitalism. In this environment, the Russian military has faced serious problems. There has been considerable debate concerning the new military doctrine and adjusting to the post-Cold War security environment. Defense Minister Grachev described the military doctrine that the Russian Security Council eventually adopted as follows:

The new doctrine emphasizes preventing/deterring war in the absence of any identified potential external threats, and the use of military forces for defensive purpose only. The major purpose of Russian military forces is to protect Russia's vital national interests (the conventional order, sovereignty, and territorial integrity) from military threats.¹³

¹³ASIAN SECURITY 1994-1995 (Research Institute For Peace and Security) p 71.

Russian military forces are to be organized around two major principles. According to 'Asian Security:'

First, strategic nuclear forces will be maintained to deter nuclear and conventional war at the global level. In the event that Russia is attacked with conventional weapons by another nuclear state it will consider nuclear retaliation, but it will also consider such a defense against non-nuclear states belonging to a military bloc that includes nuclear-armed states. Russia has reserved this right to resort to nuclear weapons for defensive purposes because it will not be able to provide a non-nuclear defense against the West's high technology weapons.

The second major principle is to prevent, or contain, local or regional wars by maintaining highly mobile military forces (officially known as Constant Readiness Troops [CRT]). Russia intends to reduce the size of its military to 1.5 million men. The establishment of the CRT force is expected to compensate for the reduction in size.¹⁴

In the middle of November 1993, President Yeltsin mentioned special measures to allow Russia to catch up with the West in high-technology. Yeltsin was concerned, among other things, with the Western precision-guided munitions (PGMs). The Russian military has started to adjust its military doctrine from emphasizing quantity to focusing on quality. This is evident in the continuous modernization of forces in the Far East.

1. Nuclear Forces

Strategic nuclear forces in the Far East include ICBMs and strategic bombers deployed along the Siberian railway, and ballistic missile mounted nuclear submarines (SSBNs), such as Delta III-class nuclear submarines carrying SLBMs, deployed in the sea area centering on the Sea of Okhotsk. The ICBM has been modernized in the form of the SS-25 and others. The mainstay of the strategic bomber is the TU-95, which can carry AS-15 cruise missiles with a range of about 3,000 kilometers. With regards to SSBN's, old subs are coming out of service, but the readiness posture is maintained.

¹⁴ASIAN SECURITY 1994-1995 (Research Institute For Peace and Security) p71.

2. Ground Forces

Russian ground forces in the Far East region have been reduced in scale since 1990, and at present their strength totals 27 army divisions with approximately 240,000 personnel. Part of the army divisions have recently been reorganized as machine-gun and artillery divisions, which are central to regional defense. Some other reduced divisions in which the fill-ratio of personnel is less than 5 percent while equipment is almost 100 percent, have been transformed into mobilization bases, where the divisions can be restored to a full-fledged ordinary division by returning personnel level to fighting strength. In qualitative development, state-of-the-art T-80 tanks have been sent to the region since 1990. Modernization also continues with the development of such equipment as armed infantry combat vehicles, multiple-launch rocket vehicles, heavy artillery, and armed helicopters.

3. Naval Forces

The Pacific Fleet, the largest of the former Soviet Union's four naval fleets, is primarily based in Vladivostok and Petropavlovsk. The Pacific Fleet is comprised of approximately 745 ships with total displacement of about 1,890,000 tons, which include some 65 major surface ships. It also includes about 70 submarines (including 50 nuclear submarines) with an aggregate displacement of approximately 650,000 tons.

In recent years, the Pacific Fleet has been on the decline in quantitative terms, with two aircraft carriers being taken out of service, and its activity toned down. But it has continued to be modernized with the addition of Oscar-II-class cruise missile-mounted nuclear submarines and construction of Akula-class nuclear-powered attack submarines. The Pacific Fleet also has Ivan Rogov-class and other amphibious assault landing ships, the Ro/Flo type large transport ship "Anadyr" with a cargo capability of about 10,000 tons, and a naval infantry division. This provides significant amphibious operation capabilities. Furthermore, the fleet possesses LASH and Ro/Ro commercial ships, both of which can be diverted for military purposes.

4. Aviation Forces

Russia deploys approximately 1,220 combat aircraft in the Far East. Although the number of such aircraft has decreased, the quality continues to improve as the disposition of fourth-generation fighters. Incidentally, some third-generation fighters, which were taken out of service, are considered to be in storage without being scrapped.¹⁵

¹⁵Defense of Japan 1994 (Defense Agency) p43.

Figure 2 shows major Russian naval forces in the Far East from 1985 to 1994. This figure illustrates the quantitative decrease in ships during this period (see Appendix C for total Russian Naval Forces).

Figure 2. Major Russian Naval Force in Far East: 1985-1994

C. CHINA

After the end of the Cold War and the collapse of the Soviet Union, China suddenly looks more threatening.¹⁶ China is taking advantage of a buyer's market in Russian equipment and is beginning to expand into the void left by the scaled-down U.S. presence. Last year the Chinese finally claimed all the disputed Spratley Islands as sovereign territory and are reinforcing their island garrisons. They are also basing squadrons of newly-acquired Russian fighter bombers within striking range.

Concerning China's future, 'Asian Security' states that:

Two schools of thought have sprung up concerning China's future. Some analyses see disruption developing with China possibly

¹⁶Jane's Information Group, *Jane's Fighting Ship 1994-1995*, Butler and Tanner Ltd., London, 1988.

splitting up, while others predict that China will become a 21st century superpower. These two scenarios, which initially appear contradictory, do not necessarily preclude one another. China may indeed suffer a period of dislocation, but it could then right itself, becoming an economic and military superpower.¹⁷

In August 1993, Liu Huaqing's vision for the Chinese military was published in the Chinese journal 'Qiushi (Seeking Truth)' and in a newspaper published by the PLA (People's Liberation Army), 'Jiefangjun Bao (Liberation Army Daily).' His vision is certain to be an important contribution to discussions on China's choice of strategy. He delineated the limits for the use of military forces, and focused attention on the necessity of defending Chinese air, land and sea areas. Similarly, on July 31, 1994, Chi Haotian suggested adopting a military strategy and a national security policy that emphasizes territorial defense.

From this evidence, it appears that Chinese military leaders do not think China is currently prepared for a large-scale conflict. The Chinese military intends to modernize as necessary to fight a modern war with state-of-the-art military technology.

Chinese military leaders are emphasizing developing the Navy and Air Force.¹⁸ The foreword of 'Jane's fighting ship 1994-1995' states:

Rumors that China is building an aircraft carrier at Kuznetsov class carrier Varyag, building at Nikolayev, proved to be inaccurate, but there is no doubt that a multi-aircraft platform is a high priority naval requirement. A helicopter carrier, possibly a merchant conversion, is a more likely first step. But as Chinese and Russian commercial links appear to be strengthening, anything is possible, and transformation of second-hand ships can happen very quickly. An expansionist maritime policy is not an option given the current state of Fleet training and equipment. Nonetheless the Navy is a credible

¹⁷ASIAN SECURITY 1994-1995 (Research Institute For Peace and Security) p 75.

¹⁸ASIAN SECURITY 1994-1995 (Research Institute For Peace and Security) p96.

force in coastal regions and in support of land forces, and building a 'quality Navy' is now a stated Chinese objective.¹⁹

Figure 3 shows the major Chinese naval forces from 1985 to 1994. This figure illustrates that despite the decline in the number of ships, full tonnage increased after FY1991 (see Appendix D). China seems to have shifted to constructing larger ships that can accommodate ship-borne helicopters. During 1991, the first ship-borne helicopter force began operating as a formal detachment of the Navy.²⁰

Figure 3. Major Chinese Naval Forces: 1985-1994

D. SOUTH KOREA

The Republic of South Korea has several national security concerns: its capital is situated very close to the demilitarized zone (DMZ), it is surrounded by sea on three sides, and it has numerous inlets along its long coastline. More

¹⁹Jane's Information Group, *Jane's fighting ship 1994-1995*, Butler and Tanner Ltd., London, 1995.

²⁰ASIAN SECURITY 1992-1993(Research Institute For Peace and Security) p94.

recently, the threat of nuclear weapons has grown, with North Korea refusing to allow inspections by the International Atomic Energy Authority. South Korea has been spending around 4 percent of its GNP on national defense every year, concentrating on North Korea's enormous ground forces as the major threat. 'Jane's Fighting Ship' states:

The South Korean Navy is speeding up its submarine program, giving unusual publicity to the launch last October of the first hull built by Daewoo, while the first of the class which was built in Germany is already in service. The Koreans are not having problems building advanced submarines that have plagued countries such as India and Argentina. The KDX frigate program has been much less dynamic and has suffered countless delays. And it may now be overtaken by a new operational requirement for a much larger class of air defense destroyer. As an interim measure, more Ulsan class are being built. More mine hunters are also under construction. The first two LSTs are to start sea trials at the end of 1995.²¹

In addition, South Korean military forces include 22 ground divisions with about 550,000 personnel, two marine divisions, and an Air Force with about 490 combat aircraft, including F-16 fighters(see Appendix E).

Figure 4 shows major South Korean naval ships from 1985 to 1994. This figure illustrates an increase in the number of ships since 1988 (see Appendix F).

²¹Jane's Information group, Jane's fighting ship 1994-1995, Butler and Tanner Ltd., London, 1995.

Figure 4. Major South Korean Naval Forces: 1985-1994

E. NORTH KOREA

North Korean military forces have been enhanced since 1962 under a four point military philosophy.²² Although North Korea may be suffering from a serious economic downturn, it has allocated a large percentage of national resources to its military forces.

North Korea's military forces consist of 26 ground divisions with about 1 million personnel, a 620 ship Navy with a total displacement of 85,000 tons, and an Air Force with 810 older combat aircraft made in China and the former Soviet Union. The Air Force also includes fourth generation aircraft such as the MIG-29 and the SU-25.

Figure 5 shows the major North Korean naval forces from 1985 to 1994. This figure illustrates that naval forces have been increasing since 1990 (see Appendix G).

²²Four point philosophy means 'the whole people will be armed,' 'the whole country will be fortified,' 'all soldiers will be trained as a cadre,' 'all arms will be modernized.'

Figure 5. Major North Korean Naval Forces: 1985-1994

F. SUMMARY

Table 6 summarizes the events in the Asian-Pacific countries with security implications since the end of the Cold War. This table indicates that China looks increasingly threatening as the U.S. and Russia withdraw military forces from the Asian-Pacific area. 'Strategic Assessment 1995' states:

Specifically, the Chinese leadership seeks to use diplomatic means and the specter of improving PLA military capabilities to put teeth into Chinese claims in the South China Sea.²³

²³Strategic Assessment 1995 (INSTITUTE NATIONAL STRATEGIC STUDIES) P2.

YEAR	DATE	EVENTS
1989	17-May	Gorbachev announces the reduction of 120,000 Soviet Far Eastern forces, etc.
	4-Jun	Chinese security forces crack down on demonstrators at Tienamen Square.
	29-Sep	Vietnam declares it has withdrawn troops from Cambodia.
	9-Nov	GDR permits free departures to the West (Virtual demolition of the Berlin Wall)
	2-Dec	U.S.-Soviet summit talks(Malta, till Dec.3)
1990	18-Jan	The Soviet Foreign military announces the complete withdrawal of MiG-23s and TU-16s from
	15-Mar	Gorbachev becomes the first Soviet president.
	4-Sep	North and South Korean prime ministers meet in first high-level contact (Seoul, till Sep.7)
	30-Sep	Soviet Union and South Korea establish diplomatic relations.
1991	2-Jan	Soviet Defense Minister Yazov announces virtual completion of unilateral reduction of 500,000 Soviet troops.
	28-Feb	U.S. DoD submits to Congress " A strategic Framework for the Asian Pacific Rim."
	15-May	Chinese Communist Party General Sectretary Jiang Zemin visits Soviet Union. Sino-Soviet agreement on eastern border formally signed.
	10-Jul	Russian President Yeltsin takes office.
	5-Oct	Soviet President Gorbachev announces proposals for reduction in nuclear arms.
	10-Nov	China and Vietnam issue joint statement, declaring normalization of government and party relations.
	18-Dec	South Korea President Roh announces removal of nuclear weapons from South Korea.
	25-Dec	Soviet President Gorbachev Resigns.

Table 6. Defense Annuals in Asian-Pacific Area

1992	7-Jan	South Korea Defense Department announces cancellation of Team Spirit '92.
	29-Jan	U.S. President Bush announces a proposal on nuclear arms reduction.
	29-Jan	Russian President Yeltsin unveils proposal for reduction in CIS armed forces.
	30-Jan	North Korea signs safeguard agreement allowing IAEA inspection of nuclear facilities based on Nuclear Nonproliferation Treaty.
	19-Feb	At the 6th high-level North-South talks, "the agreement on conciliation, non-aggression and exchange cooperation between North and South "and " the joint declaration concerning the denuclearization of the Korea Peninsula" effected.
	25-Feb	China enacts Territorial Water ACT designating Senkaku Islands as integral part of China.
	20-Mar	Russian Foreign Minister Kozyrev says Soviet troops stationed on the Northern Territories were reduced by 30%, though 7,000 brigade-level forces still retained there.
	10-Apr	North Korea-IAEA nuclear safeguard agreement comes into force.
	25-May	IAEA officials make the first special inspection of North Korea's nuclear facilities.
	16-Jun	U.S.-Russia summit meeting, held in Washington, agrees on massive strategic arms reductions.
	30-Jun	Fidel Ramos takes office as president of the Philippines.
	1-Jul	U.S. and South Korea dissolve their joint field army command.
	2-Jul	U.S. President Bush announces the complete withdrawal of ground-and sea-deployed tactical nuclear weapons abroad to the U.S.
	21-Jul	Russian Foreign Minister Kozyrev announces the continued maintenance of former Soviet military facilities in Vietnam's Cam Ranh Bay.
	24-Aug	China and South Korea establish diplomatic relations.
	25-Sep	Russia announces the completion of work to withdraw Russia troops from Mongolia.

Table 6. (continued)

1992	12-Oct	14th National Congress of the Communist Party of China is held(with emphasis on strengthening military forces and defending the sovereignty of territories, territorial waters and the right to and interests of marine resources).
	19-Nov	South Korean and Russian leaders sign the basic treaty between South Korea and Russia.
	24-Nov	U.S. completes withdrawal of its armed forces from the Philippines.
	22-Dec	South Korea and Vietnam establish diplomatic relations.
1993	2-Feb	Malaysia and India sign a memorandum on defense cooperation.
	25-Feb	Kim Young Sam become South Korean President.
	12-Mar	North Korea announces secession from nuclear nonproliferation treaty(NPT).
	13-May	U.S. Defense Secretary Aspin announces the shift of the Strategic Defense Initiative (SDI) Office to the Ballistic Missile Defense (BMD) Organization.
	11-Jun	North Korea reserves withdraw from NPT, in a joint statement issued as a result of the first round of U.S.-North Korea consultation.
	1-Jul	U.S. announces plans to close or reduce U.S. bases at home and abroad.
	10-Jul	U.S. President Clinton announces a concept for a "New Pacific Community" in a speech to South Korea's parliament.
	28-Jul	A high Russian military official confirms withdrawal of MiG-23s from Tennei Airfield on Etorofu Island.
	1-Sep	U.S. DOD announces the "Bottom-up Review."
	5-Oct	China conducts an underground nuclear test.
	19-Oct	China and Vietnam sign an agreement on basic principles regarding the solution of border and territorial issues.

Table 6. (continued)

1994	14-Jan	At a U.S.-Russia summit, the two countries agree to avoid having their strategic nuclear weapons target each other.
	4-Apr	North Korea rejects the U.N. Security Council chairman's statement adopted Mar.31.
	29-Apr	South Korea and Russian defense ministers sign a memorandum on mutual cooperation and military cooperation.
	26-May	U.S. announce a renewal for China is most favored national (MFN) treatment.
	30-May	U.S., Russia and Britain announce releases of their strategic nuclear weapons from attack targets.

Table 6. (continued)

IV. ANALYSIS OF MANPOWER REQUIREMENT AND AN ALTERNATIVE FLEET CONFIGURATION

A. JAPANESE DEFENSE EXPENDITURE

1. Trends in Japanese Defense Expenditure (DE)

The ratio of defense expenditures to GNP has been under 1% since FY1967. The only exception was during the 3-year period from FY1987 through FY1989 in which the ratios were slightly over 1% (see Figure 6 and Appendix H for detail). In terms of trend, the ratio increased during the 1980's and has been decreasing since FY1990.

With regards to the ratio of defense expenditures to the national budget, it decreased from 11.3% in FY1958 to 5.1% in FY1981. From FY1981 to FY1988 the ratio increased to 6.5% then turned down again until FY1993. It settled at 6.4% in FY1994.

In comparison with the growth rate of other major budget items (Social Welfare, Education and Science, and Public Works), the growth rate of defense expenditures exceeded those of other major budget items for the first time in FY1981. This trend continued for nine years until FY1989 (see Figure 7 and Appendix I). However, since FY1991, the growth of defense expenditures decreased relative to all other expenditures. It showed a declining trend as follows; 3.8% in FY1992, 1.95% in FY1993, 0.90% in FY1994 and 0.855% in FY1995.

Figure 6. Defense Expenditure/GNP and Defense Expenditure/Budget

Figure 7. Major Account Growth Rate

2. JMSDF Budget

a. Budget Comparisons Across Services

Figure 8 shows each service's monetary budget from FY1974 to FY1992. This figure is consistent with an average overall budget growth of 5% per year. Figure 9 shows how each service's share of the budget changed from FY1975 to FY1992. In FY1992, JMSDF's portion is 24% of the defense budget and JASDF's portion is about 25% (Appendix J and K).

Figure 8. Defense Budget by Service (in 1985 ¥): 1974-1992

Figure 9. Relative Share of Defense Budget by Service: 1975-1992

b. JMSDF Budget

Figure 10 breaks the total JMSDF budget into its three major expense items: personnel and provisions, current-year obligatory outlays, and current-year materials (see Appendix L). Similarly, the JMSDF budget can be divided into personnel and provisions, front-line expenditures and other expenditures. JMSDF's front-line expenditures include current year spending on ship and aircraft procurement and ammunition. Figure 11 divides JMSDF's front-line expenditures into its components: ships, aircraft and ammunition. Front-line expenditures represent the budget for the Defense Build-up Program. Front-line expenditures exceeded personnel and provision expenses starting in FY1980, with the growth of the Japanese economy. In front-line expenditures, shipbuilding and aircraft procurement grew

srelative to ammunition until FY1980. This means the JMSDF gave higher priority to equipment than to logistics and readiness.

Figure 10. JMSDF Budget by Element²⁴

²⁴ Note: 1. Personnel & Provisions expense indicate payment for wages and meals.
 2. Current-year obligatory outlays expense indicate payment for authorized contract expense and continued projects expense.
 3. Current-year materials expense indicate payment for repair and improvement, training, purchasing oil, etc.

Figure 11. JMSDF Front-Line Expenditures by Component

B. SHIP COST ANALYSIS

1. Shipbuilding Costs

In order to find the trend in shipbuilding costs for each ship type, the cost/displacement for four ship types between the 1960s and 1990s is computed and shown in Figures 12 through 15. The four ship types include: destroyers(DD), guided missile destroyers (DDG), escort destroyers(DE), and submarines(SS).²⁵ The cost is all expressed in constant 1985 year yen.

²⁵ Note: 1. Cost/Ton in these charts are in real Yens, Based on FY1985 prices and using FY1985 deflator.(1,000 yen).
2. Line in the each chart indicates a trend line.

Figure 12. DD Shipbuilding Costs: 1960-1994

Figure 13. DDG Shipbuilding Costs: 1960-1994

Figure 14. DE Shipbuilding Costs: 1960-1994

Figure 15. SS Shipbuilding Costs: 1960-1994

The trend data indicates that the real shipbuilding cost per ton displacement on average has increased 3% annually for the last 30 years. The significant portion of the cost increase,

however, occurred around the "Oil Shock" of 1973. The pre-1973 data and post-1974 data suggest a 0.4% annual escalation rate.

2. Personnel Cost

Personnel costs are computed as the annualized sum of salaries, bonuses and on board allowances. All the costs are expressed in constant 1985 year Yen. The annual bonus is approximately 5.4 times the monthly salary. The on board allowance is approximately 27%-33% of monthly salary in the case of surface ships at port, and 48% for submarines and for the sailing allowance. Figures 16-19 show trend in personnel costs for each ship type over the indicated years.²⁶

Figure 16. Personnel Cost/Person Aboard a DD: 1962-1991

²⁶ Note: 1. Cost/Ton in these chart are expressed in real Yens, based on FY1985 prices and using a FY1985 deflator.(1,000 yen).
2. Line in the each chart indicates a trend line.

Figure 17. Personnel Cost/Person Aboard a DDG: 1971-1991

Figure 18. Personnel Cost/Person Aboard a DE: 1967-1991

Figure 19. Personnel Cost/Person Aboard an SS: 1967-1991

Here again the major shift occurred around the 1973 Oil Shock. Post-Oil Shock data suggests an annual escalation rate of 0.7 % (see Appendix M).

3. Capital Labor Ratio

In this analysis, the capital labor ratio is computed by dividing the shipbuilding cost by the ship's complement. Tables 7-10 and Figures 20-23 show the ratio for each ship type over the indicated years.²⁷

²⁷ Note: 1. Total Cost is expressed in real Yen, based on FY1985 prices and using a FY1985 deflator.(1,000 yen).
2. Line in graph indicates a trend line.

TYPE	CLASS	PERIOD	NO	DISPLACE- MENT	COMPLE- MENT	PRODUCTION COST(1985\$)	COMP./ DISP.	COST/ DISP.	CAPITAL /LABOR

is used as the base for normalization.

Table 10. Change in Capital Labor Ratio for SS Type Submarine:
1967-1993

Figure 23. Capital Labor Ratio for SS: 1967-1993

Comparing the capital labor ratio across ship types shows two distinct results: across ship types, there is a distinct shift in trend line before and after 1973; and, the capital labor ratio changes from ship class to ship class. For example, Table 7 and Figure 20 shows that the new Ame Class DD destroyer

exhibits a significantly higher capital labor ratio than the previous destroyer classes, such as the Kiri and the Yuki classes. The higher capital labor ratio reflects investment in high-technology equipment, such as Vertical Launched ASROC (VLA) and Phased Arrey Radar (FAR), to cope with modern warfare. It also demonstrates the effort to contain personnel costs by replacing labor with capital. Table 10 and Figure 23 illustrate the effect of modernization and substitution for submarines.

C. PERSONNEL ANALYSIS

1. The Future Recruiting Population

This section describes demographic trends in the youth population that constitutes potential applicants for military service. Figure 24 shows the relationship between the number of applicants and the number of recruits for the period from 1981-1990.

Figure 24. Relation Between Number of Applicants and Recruits: 1981-1990

In 1990, the JSDF accepted about 20,000 personnel out of 40,000 applicants. Since almost all applications for military service come from 18-26 year old males, declines in this population should reduce the number of future applicants, given the current economic conditions and relative compensation levels.

Figure 25 compares the recruit/applicant ratio and economic conditions measured by GNP growth rate, for the period from 1976 to 1993. The recruit/applicant ratio declines when economic conditions turn down. In a recent severe economic downturn, produced the lowest recruits/applicants ratio in the last 20 years. For FY1992 and FY1993, there are four applicants to one recruiting position, which is almost double the historic average.

Figure 25. Trend Relation Between Recruits/Applicants and Economic Condition: 1976-1993

Table 11 projects an annual decline of 2.3% for the 15-19 year old male population and 3.6% for females of the same age, between 1991 and 2006.²⁸

		(1,000 persons)					
		MALE			FEMALE		
YEAR	Age	15-19	20-24	15-24	15-19	20-24	15-24
1991		940	3,270	4,210	870	3,260	4,130
1992		914	3,360	4,274	846	3,350	4,196
1993		888	3,450	4,338	822	3,440	4,262

(as of Oct.1 of each year)

"Future Estimate of Japan's Population"
by Institute of Population Problems,
Ministry of Health and Welfare.

Table 11. The Change in Male/Female Population: 1991-2006

²⁸ Sources : Before 1993 : National census, " Population Estimate" (as of Oct. 1 each year) by Statistic Bureau of Management and Coordination Agency. After 1994 : "Future Estimate of Japan's Population" by Institute of Population Problems, Ministry of Health and Welfare(based on average estimate as of Sept. 1992).

Female Population (15-24)

Figure 26. Population Projections for 15-24 Year Old Youths:
1991-2006

Since most recruits come from the 18-19 year old male category, the expected decline in this population poses a significant future challenge for JMSDF recruiting. Continued

increases in female recruits, better pay and improving the quality of life of the Self Defense Force may be necessary to meet the future requirements.

2. JMSDF Recruits

The average ratio of the JMSDF's recruits to applicants was 5.6% during the past decade. In other words, JMSDF successfully enlisted 5.6% of all applicants to the JSDF (see Appendix N). This is considerably lower than the average ratio for the total Self Defense Force. Figure 27 shows the change in actual JMSDF recruits per year. There is a significant year to year variation. For example, the 300 FY1992 recruits are only one tenth of the recruits in FY1987. Such wide variation could pose interesting skill and age mix problems for the maritime force.

Figure 27. JMSDF Recruits: 1984-1993

Figure 28 vividly illustrates the recent difficulties in attracting the necessary JMSDF recruits, even in poor national economic conditions. JMSDF obtained fewer than 50% of the planned recruits in FY1992 and FY1993.

Figure 28. The Ratio of Actual and Planned Recruits: 1984-1993

3. The Changes in JMSDF Ship's Complement

The ratio of a ship's crew to its displacement indicates labor-intensity. Figures 28-31 show this ratio for four ship types over the years indicated (also see Appendix O). These figures show a downward trend in JMSDF ships' complements per displacement ton for each ship type. This decrease coincides with the decreasing youth population, as discussed in the previous section.

Figure 31. SS Ship's Complement per Displacement Ton:
1966-1991

E. NATIONAL DEFENSE MANPOWER DEMAND

1. The Posture of the JMSDF in the NDPO

The posture of the JMSDF in the National Defense Program Outline (NDPO) is reproduced below.

1. The JMSDF must possess one fleet escort force as a mobile operating ship unit in order to quickly respond to enemy aggressive action at sea. The fleet escort force must be able to maintain at least one escort flotilla on alert at all times.

2. The JMSDF must possess, as ship units assigned to coastal surveillance and defense, surface anti-submarine capability of at least one ship division in operational readiness at all times in each assigned sea district.

3. The JMSDF must maintain submarine units, anti-submarine helicopter units and mine sweeping units, providing the capability for surveillance and defense missions as well as mine sweeping at important harbors and major straits when the need arises.

4. The JMSDF must maintain fixed-wing anti-submarine aircraft units in order to provide the capability of carrying out missions of surveillance and patrol of nearby seas and ship protection.²⁹

Descriptions of the actual scales of organization and primary equipment included in the foregoing concepts are given as attachments. Required inventories are summarized in Table 7.

²⁹ Defense of Japan 1992 (Defense Agency) p247.

<u>Basic Units</u> Anti-submarine Surface-Ship Units (for mobile operation) Anti-submarine Surface-Ship Units (Regional District units) Submarine Units Mine sweeping Units Land-based Anti-submarine Aircraft Units	4 Escort Flotilla 10 Divisions 6 Divisions 2 Flotilla 16 Squadrons
<u>Main Equipment</u> Anti-submarine surface Ships Submarines Combat Aircraft	Approx. 60 Ships 16 Submarines Approx. 220 Aircraft

Table 7. JMSDF Inventory Level as Stipulated by NDPO

2. Estimated Personnel Demand for Ships in NDPO

The JMSDF inventory includes 60 ships, 16 submarines, and 30 mine-sweeping crafts. Both ships' crews and aviation crews are needed to support this inventory. However, ships' crews account for approximately 44% of JMSDF personnel. Thus, trends for ships' crews likely represent the general trend for JMSDF personnel. Figure 32 shows the estimated demand for ships' crews required to maintain about 60 ships. These estimates were calculated based on ships' complement. Complements for new ships are as follows: "MURASAME" type DD (complement: 170); new type SS (complement: 70); MSC (complement: 40); and auxiliary ships same as FY1995 level.

Figure 32. Change in Estimated Demand for Ships' Crew

As shown in Figure 32, the demand for ships' crews is estimated to decline by 0.5% annually. Older ships with larger crew sizes are continually replaced by newer ships with smaller crew sizes. This will continue through the year 2001.

However, the question remains as to whether the lower demand for ships' crews will be met in light of the rapidly decreasing youth population. Earlier, Figure 26 showed that the youth population is expected to decline in the next 10 years by 2.3% for males and 3.6% for females. The larger relative decline in the applicant pool means it will be considerably harder for the JMSDF to fill future recruit requirements.

JMSDF must consider new options to fulfill its future missions. The options include continued on-board manpower-saving measures, increased employment of female and older personnel, improvements in quality of life, and increases in monetary remuneration. The feasibility of increasing monetary

remuneration to attract more JMSDF recruits is examined in the following section.

3. Improvement in Monetary Remuneration

One possible solution involves increasing the JSDF's monetary remuneration. Salaries for a given age group are based on average salaries of their civilian counterparts. One approach to increase JSDF recruits is to double their salary.

In the FY1993 Defense Budget, the personnel and provisions expense category includes both salaries and provisions. The provisions cost was 1,940 trillion yen (see Appendix P). Since the ratio of personnel to provisions is about 98%, the cost of personnel salaries was 1,901 trillion yen. If this value is doubled, the personnel expense becomes 3,802 trillion yen. Adding this value to the provision expense yields 6,541 trillion yen as the total Defense Budget. Japan had a 495,300 trillion yen GNP in 1993.³⁰ Thus, the ratio of defense expenditures to GNP would be 1.3%. This is approximately 0.3% higher after doubling salaries.

Table 12 shows the ratio of defense expenditures to GNP for other countries. In comparison with these countries, Japan's defense burden with the higher salaries does not seem unreasonable.

³⁰ Defense of Japan 1994 (Defense Agency) p282.

Table 12. Defense Expenditures and Defense Burdens for High-Ranking Countries (1992)

F. AN ALTERNATIVE FLEET CONFIGURATION

1. Review of the Current Fleet Configuration

In accordance with the policy directive that NDPO adopted in October 1976, JMSDF has about 160 ships, including 62 destroyers, 16 submarines, 36 mine sweepers, and other service forces or auxiliary ships (see Figure 33). As shown in Figure 34, 59% of the total ship personnel is assigned to Destroyers. In addition, destroyers can be divided into four categories, based upon their missions (i.e., Anti-Submarine ships, Anti-Air

ships, Anti-Surface ships, and Multi-Purpose ships). Figure 35 shows the distribution of destroyers across missions.

Figure 33. The Distribution of JMSDF Ships

Figure 34. The Distribution of Ships' Crews

Figure 35.

The Distribution of JMSDF Destroyers Across Missions

Note that half of all JMSDF Destroyers are designed for anti-submarine warfare. Such predominance of anti-submarine warfare in JMSDF reflects the joint Japanese/U.S. strategy to counter Soviet submarine threats during the Cold War. However, the possibility of full-scale attack on the sea-lanes by Soviet submarines has declined. Consequently, the number of these ships could be reduced. In fact, many experts call for a more balanced Japanese defense capability.³¹ It is important to conduct a thorough review of Japanese defense capabilities. Such a review should cover a broad range of Japan's defense-related matters, including organization, formations and deployment of the SDF, human and fiscal constraints, and the latest technological trends. The following will consider a possible alternative fleet

³¹ The Modality of the Security and Defense Capability of Japan (Advisory Group on Defense Issues) p22.

configuration and examine its feasibility in terms of costs and manpower requirements.

2. Fleet Configurations in Other Countries

Before considering a new fleet configuration for JMSDF, it may help to examine the fleet configuration of other countries. Their assets are categorized into aircraft carriers (CV), ballistic missile submarines (SSBN), other submarines (SS), cruisers (CC), destroyers (DD), frigates (FF), mine warfare ships (M/W), amphibious warfare ships (A/W), and auxiliary ships. Figures 36 through 39 show fleet configurations for the U.S., Russia, France, the U.K., Russia Pacific, China, South Korea, North Korea and Japan. Configurations are expressed in numbers of ships and full ton displacement (in natural logarithmic scale) (see Appendix Q). Figure 38 visually illustrates how the U.S, Russia, U.K, and France have well-balanced fleet configurations. In contrast to these countries, JMSDF lacks the strategic capability and ability to defend any area beyond JASDF's fighter coverage range.

a. Comparison of Aircraft Assets Comparison Across Countries

Figure 40 compares the naval aircraft assets of the previously listed countries. They are categorized into bomber (BBR), fighter (FTR), anti-submarine warfare (ASW), maritime reconnaissance (MR), electric warfare (EW), airborne early warning (AEW), commando (CDO), and mine countermeasure (MCM) aircraft. Figure 40 again illustrates that the ASW mission capability dominates in the JMSDF; JMSDF lacks other mission capabilities.

3. An Alternative JMSDF Fleet Configuration

An alternative JMSDF fleet configuration for the Post-Cold War period is summarized in Table 13. Table 14 provides a more detailed description of ship assets and personnel requirements

based on the new configuration. The personnel complement was calculated based on the ratio of crew/displacement ton calculated earlier. The number of DDV and DDH, DDG, DD is consistent with a basic escort flotilla (1 DDV, 1 DDH, 2 DDG, 8 DD and 2 AOE). Table 15 shows the associated aircraft configuration. Figure 41 contrasts the old and new fleet configurations in terms of displacement tons (expressed in natural logarithms). The new configuration provides an enhanced anti-aircraft capability.

<u>Basic Units</u> Multi-Purpose Surface-Ship Units (for mobile operation) Multi-purpose Surface-Ship Units (Regional District units) Submarine Units Mine sweeping Units Land-based Anti-submarine Aircraft Units	2 Escort Flotilla 10 Divisions 6 Divisions 2 Flotilla 16 Squadrons

TOTAL		306	162	4,234

Table 18. Estimated Aviation Maintenance Personnel Requirement

c. Total Estimated Manpower Requirement for New Fleet Configuration

Table 19 shows the total estimated manpower for the new fleet configuration. "ON SHORE", "COMMON", and "RESERVE" personnel requirements are based on current staffing levels.

TYPE	MANPOWER
SHIP'S CREW	18,740
AVIATION	6,599
ON SHORE	11,000
COMMON	2,000
RESERVE	2,000
TOTAL	40,339

Table 19. Total Estimated Man Power
Requirement for New Fleet Configuration

The alternative fleet configuration requires 40,339 personnel, which is a 12.5% reduction from the current manpower level (the FY1994 JMSDF personnel level is 46,085). This suggests that the alternative fleet configuration has a more viable manpower requirement than the existing configuration. However, this reduction alone may not be sufficient to solve the future staffing problem.

5. Comparative Cost Estimate of the Current and New Fleet Configurations

This section compares the costs for the current and new alternative NDPO configurations. Total costs are estimated for each configuration during the period from FY 2005 to FY 2015.

a. Cost Estimate of Ship Assets

Table 20 estimates the ship asset cost for the current NDPO configuration from FY2005 to FY2015. Table 21 estimates the ship asset cost for the new NDPO configuration. Calculations for these tables are provided in Appendices R and S. Comparing Tables 20 and 21 shows that the new NDPO configuration reduces ship asset costs by 1.172 trillion yen, or 31.8%.

(unit:Constant 1,000Yen in 1985 year Yen)

Note: Escalation Rate is 0.031, average from 1985 to 1993

Table 24. Estimated Personnel & Provisions Cost: Current NDPO Configuration

(Unit: Constant 1,000 Yen in 1985 year Yen)

1993 Budget (real)	Budget/Person		Number of Personnel in 2010	Expense in 2010	Expense 2005 - 2015
	1993	2010			
329,059,411	7,791	13,091	40,339	528,077,561	5,280,775,615

Note: Escalation Rate is 0.031, average from 1985 to 1993

Table 25. Estimated Personnel & Provisions Cost: New NDPO Configuration

b. Front-Line Costs

Front-line costs in the JMSDF budget include three costs: ship assets, aircraft assets, and ammunition. Each cost for the current NDPO configuration is estimated as follows:

- Ship Assets: 3,684,784,233 (1,000 Yen) -Table 20
- Aircraft Assets: 3,065,019,522 (1,000 Yen) -Table 22
- Ammunition: see Table 26 below

(Unit: Constant 1,000 Yen in 1985 year Yen)

1993 Budget (real)	Expense in 2010	Expense 2005 2015
41,097,536	183,485,030	1,834,850,298

Note: Escalation Rate is 0.092, average from 1985 to 1993

Table 26. Ammunition Expenses for
the Current Configuration

Ammunition costs are assumed to escalate 9.2% annually from their current level. Ammunition costs are assumed to be the same for both the current and new NDPO configurations.

Each cost item for the new NDPO configuration is estimated as follows:

- Ship Assets: 2,512,110,752 (1,000 Yen) -Table 21
- Aircraft Assets: 3,097,381,270 (1,000 Yen) -Table 23
- Ammunition: 1,834,850,298 (1,000 Yen) -Table 26

c. Others Costs

These costs were calculated according to the methodology used to estimate ammunition costs, except the escalation rate is 7.1% annually. These costs are the same for both configurations (see Table 27).

(Unit: Constant 1,000 Yen in 1985 year Yen)

1993 Budget (real)	Expense in 2010	Expense 2005 - 2015
331,655,062	1,064,406,785	10,644,067,853

Note: Escalation Rate is 0.071, average from 1985 to 1993

Table 27. Other Expense (2005-2015)

7. Comparison Costs for the Current and New NDPO Configurations

Table 28 compares the cost of the current and the new NDPO fleet configurations in the JMSDF annualized budgetary format. The new NDPO fleet configuration saves 687 billion yen annually; a 2.8% cost reduction.

(Unit: Constant 1,000 Yen in 1985 year Yen)

Ctegrory	NDPO level	New NDPO level
ship Assets	3,947,550,536	2,858,020,484
Aircraft assets	3,091,037,992	3,123,710,108
Personnel & Provisions	6,380,929,100	5,280,775,615
Ammunitions	183,485,030	1,834,850,298
Others	10,644,067,853	10,644,067,853
Total	24,247,070,511	23,741,424,358

Table 28. Comparison of Current NDPO with an Alternative Fleet Configuration

V. CONCLUSION

Japan may be at an important turning point similar to what the country experienced fifty years ago.

Since the World War II, Japan has been reconstructing its economic infrastructure under a military umbrella provided by the United States. Japan succeeded in developing into a major economic power without serious public discussion about defense policy. This domestic condition is represented in the phrase "Water and safety are FREE," which became popular in Japan during this period. However, this course of action was supported only during the Cold War when the U.S. and Japan were confronted by common threat, communism.

When the Cold War ended in 1989, the U.S. and Soviet Union began reducing their military power in the Asia-Pacific region. With the end of Cold War, however, China's powerful presence has been increasingly felt by her Asian neighbors. The Spratly Islands episode provided a glimpse of what the future might hold for China's neighbors. It left an indelible mark on the future direction of Asian-Pacific security.

In Japan, members of the Advisory Group on Defense Issues agree that Japan's place in the world is changing. They state that isolationism and defense spending cuts in are not in line with the global political reality.

This background motivated the primary research question, "What changes should JMSDF make to meet the challenges of the post-Cold War era?"

To answer this question, the thesis reviewed Japan's defense capability, and those of other Asia-Pacific countries. Although annual Japanese defense expenditures are now ranked 7th in the world, the Japanese defense force is not well-structured for the post-Cold War environment. A hypothetical alternative fleet configuration was constructed to determine its feasibility

in terms of costs and manpower requirements. The alternative configuration is found to be both cheaper and require less manpower.

However, adopting an alternative configuration requires a significant change in attitude toward national security amongst the Japanese population. Only frank and in-depth discussions concerning basic defense policy among the Japanese people and politicians determine the shape of the new fleet configuration. Furthermore, such discussions should be couched in a larger international context involving a firm understanding of the Japan-U.S. relationship.

APPENDICES

APPENDIX A.
BASIC POLICY FOR JAPAN'S NATIONAL DEFENSE

The objective of national defense is to prevent direct and indirect aggression, but once invaded, to repel such action, thereby preserving the independence and peace of Japan founded upon democratic principles.

To achieve this objective, the government of Japan hereby establishes the following principles:

1. To support the actives of the United Nations and promote international cooperation, thereby contributing to the realization of world peace.

2. To promote public welfare and enhance the people's love for the country, thereby establishing the sound basis essential to Japan's security.

3. To develop progressively the effective defense capabilities necessary for self-defense, with regard to the nation's resources and the prevailing domestic situation.

4. To deal with external aggression on the basis of the Japan-U.S. security arrangements, pending the effective functioning of the United States in the future in deterring and repelling such aggression.
